

MELT N POUR WORKSHOP

Soap Bases to buy:

- 1 – Glycerin Soap Base (transparent)
- 2- Goat Milk Soap Base (opaque)

How to Melt the Base?

Double Boiler OR Microwave

Melt and pour begins to melt around **120-125 ° F**. When pouring layers, it's crucial that the top layer is not too hot or it will melt the soap below. Make sure that the top layer has cooled to 125 ° F or below before pouring.

Adding Fragrance in Melt n Pour

Add around 15-20g of fragrance per 1kg

Add a little lesser if the fragrance is strong like peppermint and stuff (around 10g per kg)

Adding Color to The Soap

Liquid colors are the best to work with as they mix very easily. There is no temperate to add colors, but generally try to avoid heating the color. Meaning add color after you have melted the base.

Do's

- 1- Make sure you are buying good quality soap base
- 2- Use liquid colors
- 3- Use rubbing alcohol while adding a different layer and to burst bubble
- 4- Heat the base (around 140-150 degrees F)
- 5- Use body safe fragrance oils only

Don't's

- 1- Don't over heat the base
- 2- Don't heat the base with powders (like neem or sandalwood etc) or colors or fragrance
- 3- Don't add preservative
- 4- Don't add oils or soft butters
- 5- Don't keep soap with essential oils for too long

Loofah Soap

Loofah

Glycerin Soap Base OR Goats Milk Soap Base - 100g

Fragrance oil - 2g
